Histopathology (Kidney) # ^
LAB. NO. :- B/14933/2020

CLINICAL DETAILS:

Right renal mass.

SPECIMEN:

Right radical nephrectomy specimen

GROSS EXAMINATION:

Received a right radical nephrectomy specimen measures 9.5x8x6 cm. Ureter measures 10x1 cm. Cut section shows a tumor measures 8.5x8.5x6 cm. Cut section of tumor is solid greyish white soft and fleshy homogenous. Compressed renal parenchyma noted in the periphery. Weight- 300 gms
 Sections ; A. Resected end of ureter, B. Resected hilar vessels, C to L. Tumor, M. Tumor with normal renal parenchyma, N. Normal renal parenchyma, O. Renal sinus and hilum, P. Proximal ureter, Q. Mid ureter, R. Cystic part of normal kidney.

MICROSCOPY:

Sections shows a triphasic tumor composed of predominantly rounded masses of small dark round cells interspersed with tubules and fibrous stroma. The small round cells have dark clumped chromatin, inconspicuous nucleoli and scanty cytoplasm. Two foci of highly pleomorphic cells with bizarre nuclei noted. Focal cartilaginous differentiation and adipose also noted in the tumor. Large areas of necrosis seen. Distal resected end of ureter and renal vessels are free of tumor. Renal sinus and hilum free of tumor. Two hilar lymph nodes seen which are free of tumor.

IMPRESSION:

Histologic Type

Wilms tumor, focal anaplasia

ADVISE : IHC for confirmation.

Procedure

Radical nephrectomy

Specimen Weight

Nephrectomy weight: 300 g

Specimen Laterality (required for bilateral tumors only)

Histopathology Report

Report Findings:

Received three HE stained slides and three paraffin blocks as part of right nephrectomy specimen labelled as B/14933/2020 C, D, and F for review.

Sections examined show presence of triphasic Wilms tumor with large areas of necrosis. Heterologous cartilaginous element is also seen. Rhabdoid differentiation is seen.

Lymphovascular emboli is seen.

No features of anaplasia are seen in the sections examined from the blocks submitted.

Please read carefully and follow checked ✓ instructions चिन्हांकित ✓ सूचनाओं का पालन करें:

- ☒ Bring contrast injection Iomeprol 400mg/Iohexol 350mg/Iobitridol 350mg/other equivalent 30ml यह दवा साथ लाएं.
- ☒ Fasting for 4 hours (only water or medicines are allowed) 4 घंटे खाली पेट रहें (पानी, दवाएं ले सकते हैं)
- ☐ Do not pass urine for 3-4 hours 3-4 घंटे पेशाब रोके रहें.
- ☐ Bring 1 litre of drinking water for you पीने का पानी साथ लाएं.
- ☒ Bring on adult attendant with you एक वयस्क साथी साथ लाएं.
- ☒ Bring previous X-rays or other films, if any पुराने एक्सरे या फिल्मों साथ लाएं.
- ☐ Pay Rs. 200/300/750/1500 at Cash Counter no. 13 (each body part is charged separately) इतना शुल्क जमा करें.
- ☐ Special instruction विशेष सूचनाएं

सीटी स्कैन एवं मेमोग्राफी की रिपोर्ट
कमरा सं. 45 से प्राप्त करें

General information सामान्य जानकारीयां :

- Contrast injection during CT scan can occasionally cause side effects ranging from mild allergy like itching to severe breathlessness, hypotension or shock. These cannot be predicted but chances are higher in those with history of asthma or allergy to medicine. So please inform if you have history of asthma or allergy to any medicine. सीटी स्कैन में कंट्रास्ट दवा के इंजेक्शन से कभी कभी दुष्परिणाम (उल्टी, खुजली, शॉक इत्यादि) हो सकते हैं, यदि आपको दमा या कोई एलर्जी है तो पहले बताएं.
- Ladies if you could be pregnant, inform radiographer, nurse or doctor before the test महिलाएं यदि गर्भवती हैं तो पहले बताएं.
- Your test is likely to be over before 1 pm आपका टेस्ट 1 बजे के पहले पूरा हो सकता है.
- Report will be sent to OPD counter No. 9 or ward after two working days रिपोर्ट दो दिन के बाद काउंटर 9 या वार्ड में भेज दी जाएगी.

Consent of the Patient for contrast Injection कंट्रास्ट इंजेक्शन के लिए रोगी की सम्मति।

I have been explained the risks associated with iodinated contrast medium injection. I hereby give my consent for injection of contrast media to me by any route deemed necessary मुझे कंट्रास्ट इंजेक्शन के दुष्परिणाम की जानकारी दी गई है. मैं कंट्रास्ट इंजेक्शन के लिए अपनी सम्मति प्रदान करता हूँ/ करती हूँ.

Refer By - Dr. Amit Upadhyay MD DM

Date- 10.10.2020

NCCT & CECT WHOLE ABDOMEN

Multiple contiguous serial sections have been taken from domes of diaphragm downward upto the pubic symphysis.

Liver: reveals normal CT attenuation pattern. No dilatation of intrahepatic biliary radicles is seen. Liver margins are normal. Hepatic veins are normally opening into IVC. Hepatic vasculature appears normal. Portal venous system of liver appears normal.

Gall-bladder: normal. CBD is normal.

Pancreas: has normal CT appearance. Peri pancreatic fat planes are maintained. Portal and splenic veins are normal and reveals normal enhancement.

Spleen is normal in size, shape and C.T. appearance.

Right kidney is enlarged lying obliquely and measures 9.1x5cm. A large well defined heterogeneously enhancing mass lesion measuring ~ 7.3 x 6.7x6.6 cm is seen involving most of the part of right kidney sparing only small parts at both the poles. The mass is also showing necrotic area. The remaining cortex is showing normal perfusion in arterial phase. Pelvicalyceal system of remaining part appears mildly dilated, however no excretion is noted till 2 hrs scan. Peri-nephric fat appears normal. Gerota's fascia appears normal. *Right ureter is not opacified.*

Right renal artery and renal vein are normal.

Left kidney measures 7.5x4.0 cm. It is normal in its anatomical structure and function. Pelvicalyceal system appears normal. Renal cortical thickness appears normal. Renal margins are smooth and regular. Peri-nephric fat appears normal. Gerota's fascia appears normal. Left ureter appears normal in its course and caliber. Left renal artery and left renal vein are normal.

Both adrenal glands are normal.

Urinary bladder: walls are normal in thickness. No intraluminal pathology seen.

Contrast filled stomach, duodenum and small bowel loops appear normal.

Rectum, sigmoid colon, descending colon are normal. Transverse colon, ascending colon and caecum are normal. Peri-rectal fat planes are normal. Ischio-rectal fossae are normal.

Prostate appears normal.

Aorta and IVC appears normal. No evidence of retroperitoneal and pelvic lymphadenopathy is seen. Pelvic musculature appears normal and bilaterally symmetrical.

Lower dorsal and lumbo-sacral vertebrae, bony pelvis and both hip joints appear normal.

Opinion:-

- **Enlarged right kidney with heterogeneously enhancing mass lesion as described above---**
-Likely neoplastic etiology (? Nephroblastoma).
Please correlate clinically.

ADV: Histopathological correlation.

Dr. Vineet Srivastava

MBBS, M.D. (Radiodiagnosis)

Note: Impression is a Professional opinion & not a Diagnosis. All Modern Machines/Procedures have their limitations. If there is variance clinically this examination may be repeated or reevaluated by other investigations. Typing errors sometime are inevitable. Not for medico-legal purposes. Patient's identity cannot be verified.
